

Disable 'Suggested Names' with latest Visual Studio 2017 Update?

- I've just updated to the newest Visual Studio 2017 update (enterprise) through the 'Extensions and Updates' window.
- I've noticed they have added 'Suggested names' to intellisense when using snippets (i.e `propfull`), which seems to overwrite the value you have typed when pressing 'tab' (the normal way to cycle through items).
- This is super annoying, does anyone know how to disable it?

For others finding this, it's currently not an option, and has been raised here: developercommunity.visualstudio.com/content/problem/92721/... – maxp Sep 19 '17 at 7:36

- Not only is it super annoying, it encourages poor coding practices. The suggested names for DateTime for instance are terrible variable names. Don't call your DateTime variable `date` ; call it `hireDate` or `birthday` or something that tells you what the variable actually is. – user2023861 Apr 13 '18 at 18:45

In Spanish, it's Opciones -> Editor de texto -> C# -> IntelliSense , the Mostrar sugerencias de nombres checkbox. – [Léster](#) May 1 at 16:47

Please uncheck "Inconsistent Naming" if you use Resharper.
