Application Insights missing from Visual Studio 2019

Asked 7 months ago Active 6 months ago Viewed 623 times

As the title states I cannot find any Application Insights menu's or options in Visual Studio 2019.

1

Searching has been fruitless and I see no updated documentation from Microsoft around support for Application Insights in Visual Studio 2019.

Is this something that is not available yet?

Just checked now and I am missing the Application Insights package from the Tool menu. Doing a check of what is installed via the Visual Studio Installer. — [Oliver](#) Apr 12 at 9:10

Double check what you have installed as part of your Visual Studio 2019 installation. The product required is (aptly named) "Application Insights Tools for Visual Studio Package"

I had the same issue. The Toolbar disappeared when updating Visual Studio 2019 from version 16.0.0 to 16.0.2.

1

The solution for me was to just enable the Toolbar again.

Go to "Tools/Customize..." and select "Application Insights" in the Toolbars pane (See picture).

by default, that toolbar only shows up when debugging, so it might have gotten reset on the update? – [John Gardner](#) Apr 24 at 18:29
