

How to show 'git blame' in Visual Studio 2013?

Asked 5 years ago Active 1 year, 10 months ago Viewed 17k times

In Visual Studio 2013 update 2 with Git integration, is there a way to show in the editor who last modified a line? (like the `git blame` command?)

TFS (and so does VS) uses the Term "Annotate" instead of "Blame", just right click on the editor when you have a file open, then click **Source Control, Annotate**.

I'm sure there are other ways to do it, either from the menu, toolbars, solution explorer, etc.

1 Is there an option to edit during annotate? – [fantastory](#) Nov 27 '14 at 11:30

1 To enable this, select Tools > Options... > Source Control > Microsoft Git Provider. – [yoyo](#) Jul 29 '15 at 17:08

@yoyo or just select the git repo in the team explorer window. – [DaveShaw](#) Jul 29 '15 at 20:12

@DaveShaw Good suggestion. My repo opened automatically (and annotate works fine for me) but a teammate is having trouble. He does appear to have the repository open and to get some git functionality, but most operations result in an error "Value cannot be null. Parameter name: destination" - does any help? (Our solution and all its projects and files are in the git repository) [yoyo](#) Jul 29 '15 at 21:52

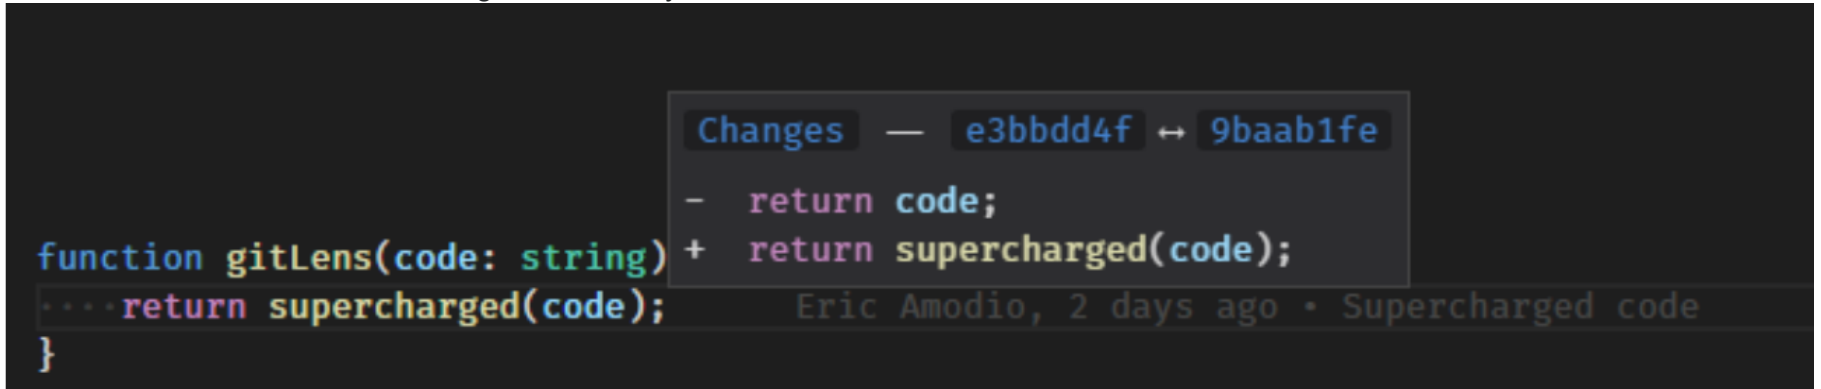

By using our site, you acknowledge that you have read and understand our [Cookie Policy](#), [Privacy Policy](#), and our [Terms of Service](#).

For Visual Studio Code (if you use that instead of Visual Studio 2013), try this extremely useful extension named: Git Lens:

<https://marketplace.visualstudio.com/items?itemName=eamodio.gitlens>

0

It will show who modified a line using an in-line to your code text like shown below:

```
function gitLens(code: string) {  
  ...return supercharged(code);  
}
```

Changes — e3bbdd4f ↔ 9baab1fe

- return code;
+ return supercharged(code);

Eric Amodio, 2 days ago • Supercharged code

Gone are the days of typing `git blame <file-name>` and then searching for the suspected line in whole code.
