I'm getting "[project] nuget configuration is invalid" error. I received an error like this before and used the 'Update Nuget package manager' solution mentioned here:

[Unable to Install Any Package in Visual Studio 2015](#)

I've also tried the other solutions mentioned in that link to no avail.

- **Restarting Visual Studio**
- **Deleting nuget.config**
- **Deleting packages.config**
- **Updating nuGet Package Manager.**

Also, I'm able to see the nuGet Packages at the solution level and other projects within this solution.

And, if I go to Package Manager Console (Tools -> NuGet Package Manager -> Package Manager Console), I can't see the projects having this issue in the project drop down, but I see the other projects in the solution.

Simply restarting Visual Studio worked for me.

- 6 This solution and many others have been listed [here](#). As mentioned in the question, this is a case where this and many of the listed solutions have already been tried – [Ash](#) Dec 4 '16 at 23:52
- 3 it helped me too. Many MS product's glitches cured this way: you need to restart, reboot, reload. – [YMC](#) Jan 23 '17 at 16:57
- 32 It's amazing how this works for VS 2017 RC as well. Microsoft likes to maintain even their bugs. :) – [Vada Poché](#) Jan 31 '17 at 9:35
- 26 VS Pro 2017 too! – [Blindy](#) Mar 17 '17 at 19:03
- 4 Closing the solution and reopening it worked for me, rather than restarting visual studio entirely. – [aleksk](#) Apr 1 '17 at 13:33

Updating Visual Studio to 'Update 2' got it working again.

14

Tools -> Extensions and Updates ->Visual Studio Update 2

As mentioned in the question and the link i posted therein, I'd already updated NuGet Package Manager to 3.4.4 prior to this and restarted to no avail, so I don't know if the combination of both these actions worked.
