When I am at a breakpoint and if I want to ignore all the rest of breakpoints and move on, what shortcut should I use?

| visual-studio | breakpoints | shortcut | ignore |

2   Really good question but I can't see a single answer that really answers the question, i.e. skipping all breakpoints, **not** disabling them. – Andreas Mar 28 '18 at 6:17

@mrt I agree. Place to vote: visualstudio.uservoice.com/forums/121579-visual-studio-ide/... – nawfal May 17 '18 at 5:10

You can select "**Disable All Breakpoints**" from the **Debug** menu.

This and then continue with F5 .

You could set this up as a keyboard shortcut under *Tools/Options/Keyboard*.

1   thanks! It was useful and quick to implement. You can also assign a shortcut for "Enable All Breakpoints" I have used CTRL + 7 for disabling and CTRL + 8 for enabling. Most of the shortcuts are reserved already. – pencilCake Dec 3 '09 at 9:29

4   You need to set Debug.DisableAllBreakpoints or Debug.EnableAllBreakpoints – Rohit Jul 25 '11 at 8:41

In Visual Studio 2012 it's slightly different. You can set up your own breakpoints by going to Tools -> Options -> Environment -> Keyboard. – bstrong Mar 10 '15 at 18:35

1   If you have Resharper and struggled to find 2 free shortcut keys for Disable/Enable All Breakpoints, I've used [[Ctrl + Shift + ` ]] for Disable , [[ Ctrl + Alt + `]] for Enable – Francis Aug 16 '16 at 17:47 🖉

Well, you can:

1. **delete** all breakpoints using `Ctrl` + `Shift` + `F9`

2. **disable** all breakpoints from the ->Debug menu.

Disabling breakpoints does not have a shortcut defined, but you define your own in ->Tools->Options menu under Environment->Keyboard. Also `Shift` + `F5` stops debugging altogether.

`Ctrl` + `Shift` + `F9` will delete them all.

To disable all breakpoints - either you do it from the menu - or you go to option -> environment -> keyboard, and create a shortcut there.

Enabled / Disabled **just one break point** at a time with **Ctrl + F9**.

Though the cursor has to be on the given line of code.

By default there is no option available to Disable/Enable all breakpoints, so you need to add it. Steps to add Disable/Enable breakpoints are as :-

1) Under **Tools** tab select **Customize**.

2) Then under **Commands** tab, you would find 3 options(drop-downs) - **Menu bar**, **Toolbar** and **Context menu**.

3) So under **Menu bar** drop-down, scroll down and select option **Debug**.

4) And now under **Controls** section, select the command you need to add i.e here you would select command **Enable All Breakpoints/Disable All Breakpoints** and click **Add Command**.

5) Close this pop-up and boom, now you would find this option under **Debug** section of the main console.

No need to thank, just an upvote would work..!! :P :P

What do you mean? The short cut which I am suggesting is not correct for deleting breakpoints? – Amar HR Jul 12 '13 at 6:04 🖉

Sorry, I meant The OP asked., how could he disable all break points.(Not to delete all break points). – Muthu Ganapathy Nathan Jul 12 '13 at 6:08

i.e Disable/Skip, so that he could add it later – Muthu Ganapathy Nathan Jul 12 '13 at 6:09
